

1. Home Screen (Active Weather & Diagnostics)

Displays current weather diagnostics alongside the newly introduced glassmorphic Network Status Card. This card dynamically monitors Wi-Fi or cellular connections, carrier info, connection speed, and plan billing types.

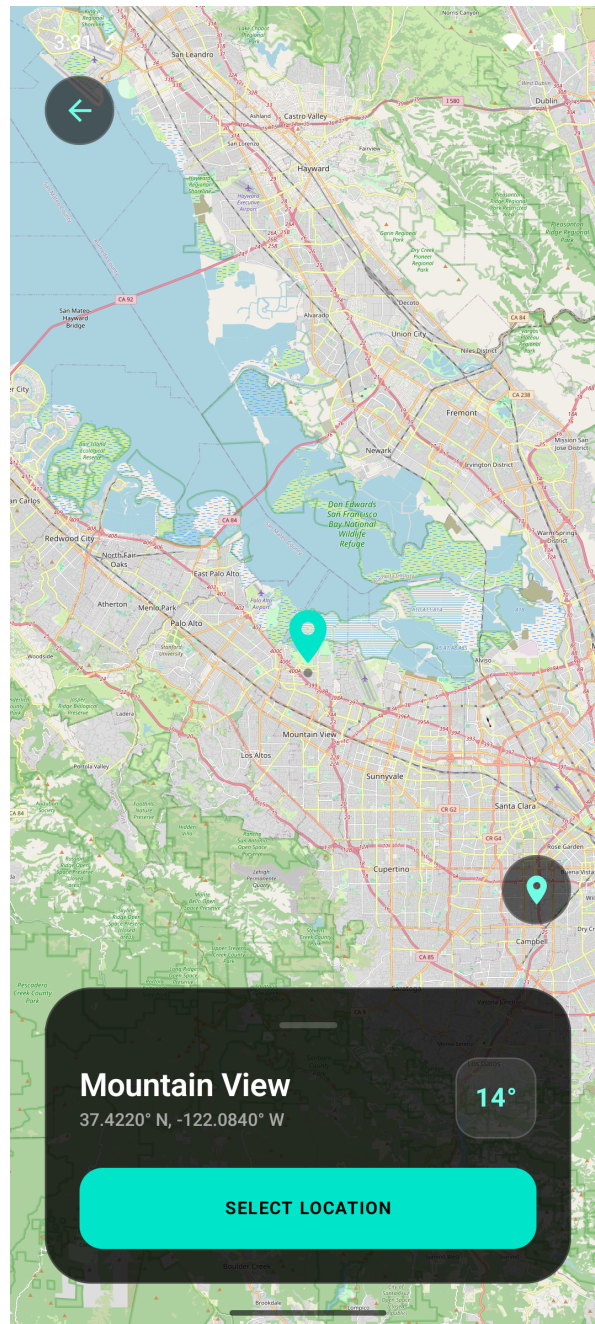

2. Location Disabled Fallback Screen

Exhibited when GPS or network localization services are turned off in settings. It provides options to navigate directly to system location settings or fall back to the last cached database values.

3. Interactive Map Screen (OpenStreetMap)

Integrates OsmDroid to offer an interactive world map selector. The user's GPS position is marked, and clicking any map coordinates updates and saves the location selection.

4. Compass Telemetry Screen

Utilizes Android hardware rotation sensors (accelerometer and magnetometer fusion) to track real-time telemetry. Displays a rotating compass dial pointing to magnetic North.
